

✓ Applications

The range of compressors is designed to test, adjust and calibrate measuring instruments mechanical or electronic pressure compared to a standard

They consist of a pool of oil sight gauge connected to a piston / cylinder unit. The capstan can generate a pressure by compressing the fluid through the piston. Two connectors are provided for receiving the instruments compared.

These compressors are designed to pressure the relative calibration. They are robust and easy to use and have the opportunity to grow in dead weight tester by simply adding a kit comprising: piezometric and a set of weights.
